

Colonic Implants

An implant is an enema-type therapy that delivers healing herbs and/or supplements throughout the entire colon to address specific concerns. Usually administered after a colonic, the implant is retained for a specific amount of time, then expelled.

Coffee Implant - \$35

Coffee is used to detoxify the liver and increase glutathione (an antioxidant) production. There is no better stimulant for bile production and its subsequent flushing than coffee. The caffeine stimulates the relaxation of smooth muscles causing dilation of blood vessels and bile ducts. The mopping up of free radicals effectively inhibits the formation of carcinogens and performs a protective role against cancer.

Chlorophyll Implant - \$35

Chlorophyll is a completely safe, natural, organic plant extract and a powerful alkalizer and detoxifying agent when used as an implant. It oxygenates, alkalizes and detoxifies the blood, and helps regenerate tissue on a cellular level. The added probiotics help replenish good bacteria in the body.

Ozone Implant - \$60

Ozone has profound healing properties as it can eliminate anaerobic pathogens such as bacteria, viruses and parasites, while protecting gut-friendly bacteria. As ozone is a powerful antibacterial, germicidal and anti-fungal agent, harmful bacteria, viruses, cancers, candida, fungi and toxins cannot live in an ozone-rich environment. Even heavy metals, environmental pollutants and old drug residues can be pulled from the body's cells. In this way the body's healing process is stimulated and the immune system boosted.
